

Safety in India

Women Safety

Safety of women is a major challenge in India. Often women have to alter their daily routine just to make sure they don't become a victim of crimes. Almost all women have experienced harassment at least once in their lives. In times of such a mishap their reflexes freeze and they are unable to respond or put up a defence. So we want to develop a device which could overcome these challenges and ensure the safety of women.

Proposal

Our aim is to develop an affordable wearable safety device (which is hidden from the predator) supported by an app which sends a message with the person's location to the safety contacts and starts a loud alarm noise when it senses an attempt of sexual harassment on the victim. This system can also be connected to additional accessories like a pendant which could be used as a onetime pepper spray which will

be triggered at the time of the incident to prevent the mishap like rape, kidnapping etc.

The wearable device can be attached to the bra and worn over it, if a predator tries to grope the lady the sensors in the bra trigger the messages, alarm, pepper spray etc.

USP of our product:

- The predator is unaware that the person is wearing a safety device, so he cannot plan to escape the safety features in advance.
- The product will be comfortable to wear and cause no discomfort to the person wearing the device.
- Even when the lady is unable to respond due to the panic situation, she can be helped.
- Cost effective
